Session 3 - Setting up PostgreSQL

September 4, 2018

1 Python Training: Day 2 Session 3

1.1 Setting up PostgreSQL

Install PostgreSQL on your machine, set and keep the password for the user postgres. Restart after installation (if necessary).

To manage database, several ways are possible:

1. Command line via psql.exe located in the default installation folder.

   Command for user postgres `psql.exe -U postgres`

2. Via administrator GUI application pgAdmin

   Run pgAdmin on start or find it on the default installation folder.
